### ABSTRACT

The 2001 Census of Population and Dwellings was undertaken on 1st December 2001. This census was conducted under the authority of the Statistics Act, 1966. The confidentiality provisions in this act provide against the

release or publication of any particulars relating to individuals.

This is the seventh census undertaken by the Statistics Office, the first being in 1971. Prior to this the Cook Island censuses were conducted by the Registrar General of the Justice Department. Since the annexation of the Cook Islands by New Zealand regular

census activities have been held every five years. The census counts all persons present in the Cook Islands on census night, thus it includes visitors temporary in the country. Cook Islanders who are living or are temporarily on vacation abroad are excluded.

The theme of the 2001 Census was "BE IN THE COUNT". This theme followed on from that of the 1996 "COUNTING FOR OUR FUTURE" where it encourages everyone to participate in the census for better and reliable result.

The self-governing territory of the Cook Islands consists of 15 islands and atolls that are spread over 2million sq. km of the South Pacific Ocean. The Cook Islands is defined as all the islands between 156 - 167 ° West and 8-23 ° South. Such distances

over the sea linking small populations' presents an imposing hindrance to the development of an efficient transportation and communication system. The islands are geographically divided into two groups, commonly referred to as the

Northern and Southern Group islands. The two groups of islands making up the country portray marked differences in their social, cultural and economic activities. The Northern Group islands remain relatively isolated from

the Southern Group islands.

The Cook Islands are the result of volcanic activity and coral growth. The islands of Rarotonga, Mangaia, Atiu, Mauke and Mitiaro are the emergent peaks of extinct volcanoes. The islands of Manuae, Palmerston, Penrhyn, Manihiki, Rakahanga,

Pukapuka, Nassau and Suvarrow are atolls, that is coral reefs around a lagoon on the top of submerged volcanoes. Aitutaki is part volcano and part atoll. The total land area of the Cook Islands is 23,261 hectares while its exclusive economic zone covers an area of nearly 2 million sq. km or 750,000 sq. miles. Rarotonga, with a total land area of 6,719 hectares is the

largest and most populous island (over 50% of the population) and also the administrative centre.

The Cook Islands enjoy a South Pacific moderate climate. The mean monthly minimum and maximum temperatures in Rarotonga, the capital, range between 21° and 28° Celsius. Trade winds blow almost continuously.

Rainfall is normally spread evenly throughout the year but there is considerable variation from year to year. The islands lie within the hurricane belt and severe damage to crops, housing and coastal areas (harbours) can be expected once or twice each decade. The hurricane season lasts from November to March during which time storms of less than hurricane strength may also inflict minor damage to the islands.

#### UNITS OF ANALYSIS

-Individual

-Households

## Scope

---

#### NOTES

-HOUSEHOLD: Household listing, household characteristics, energy, communication and primary activities.

-INDIVIDUAL: Individual characteristics, education, economic activity, income and fertility.

The scope of the early Cook Islands censuses was limited, in fact they consisted of head counts only. With the passage of time the census has expanded. Gradually, questions on sex, age, marital status, religion, education, employment, etc have been included. Questions on unpaid work and income earned were included for the first time in the 1996 Census. In the 2001 Census, questions on disability and waste management was included.

A personal questionnaire is completed for every man, woman and child alive at midnight on census night within the geographical boundaries of the Cook Islands. The Census excludes those persons on foreign vessels, yachts and aircraft flying through or stopping temporarily (transit). A dwelling questionnaire is completed for every occupied dwelling as at midnight on census night.

The format of the questionnaires for the 2001 Census of Population and Dwellings was similar to that of the 1996 Census. The dwelling questionnaire contained 26 questions, requesting information on the number of persons in the dwelling, type of dwelling, year dwelling was constructed, appliances and amenities, subsistence agricultural and fishing activities, etc.

The personal questionnaire was split into several parts:

Questions 1 to 6 - relates to every person in the Cook Islands on census night.

Questions 7 to 11(ii) - relates to every person in the Cook Islands on census night excluding visitors and those that were currently serving a sentence in jail.

Questions 11(iii) - relates to every person over the age of 1 year.

Questions 11(iv) to 12(d) - relates to every person over the age of 5 years.

Questions 12(e) to Q21 - relates to every person over the age of 15 years.

Questions 22 - relates only to females 15 years and over.

The Cook Islands are geographically divided into a number of Census Districts coinciding with the electoral boundaries, and these were further divided into enumeration areas. An enumerator is then assigned to collect the census forms for each enumeration area.

2001-12-03	2001-12-04	Post census night enumeration

### Data Collection Mode

Face-to-face [f2f]

### Data Collection Notes

The Cook Islands are geographically divided into a number of Census Districts coinciding with the electoral boundaries, and these were further divided into enumeration areas. An enumerator is then assigned to collect the census forms for each enumeration area.

The three phases to the census fieldwork are as follows:

- Update of household listing and Maps
- Pre-census enumeration
- Post-census night enumeration.

The Statistics Office appointed enumerators who were given the option of choosing the area they preferred.

Statistics Officers travelled to each of the islands to conduct the training sessions. Government Representatives were advised of the arrival of the Census Officer and were given an outline of the objectives of the census project. Communication between the office and the census officer on the field was encouraged.

Training of census enumerators was generally conducted in the early evenings, as this was the most convenient time for field workers. The training sessions were conducted in a constructive method encouraging feedback from both the supervisors and enumerators.

### Data Collectors

Name	Abbreviation	Affiliation
Cook Islands Statistics Office	CISO	Ministry of Finance and Economic Management

### Supervision

The Statistics Office appointed the supervisors who in turn selected enumerators for their respective areas. The tendency was to employ persons who live in the locality because of their familiarity with the people and area.

## Data Processing

### Data Editing

---

Data editing was done using Microsoft Access.

### Other Processing

---

The availability of a network computer system has added a new dimension to data processing for the office. With new database software (Microsoft Access) also being introduced, we were able to complete the data processing on time. Four temporary data entry personnel were employed to assist with the data processing while other statistical activities of the office continued.

The data was entered on an enumeration area (batch) basis. Two tables were set up to capture the information, one for the household details and the other for the personal details. The computer system carried out range checks and logical checks during the data entry stage to minimise punching errors and detect obvious inconsistencies in the data. The system was also used to detect unreasonable relationships between one variable and another.
