There were four rounds of surveys (baseline and three follow-up surveys). Each survey had a household section and an individual section. The data was saved as corresponding household data files (round1HHa.dta, round2HHa.dta, etc.) and individual data files (round1Inda.dta, round2Inda.dta, etc.).

Overview

ABSTRACT

Seasonal migration programs are widely used around the world, yet there is little evidence about their development impacts. A multi-year prospective evaluation of New Zealand's Recognised Seasonal Employer (RSE) worker program was designed to measure the impact of participating in this program on households in Tonga and Vanuatu. New Zealand launched the Recognised Seasonal Employer (RSE) program in 2007. The program set up a new migration category to allow workers to be recruited for seasonal work in New Zealand's horticulture and viticulture industries.

Between 2007 and 2010 researchers from the World Bank and New Zealand's University of Waikato conducted four waves of surveys in Tonga and Vanuatu providing 70 percent of the Pacific Island workers in the RSE. In each country the team surveyed 450 households drawn from about 50 communities, including households supplying workers, households with RSE applicants who were not recruited and non-applicant households.

The baseline survey was conducted before workers left to work in New Zealand in the first season. The workers were re-interviewed 6, 12 and 24 months later. Using the baseline data and institutional knowledge of how recruitment for the program occurred, the impact evaluation team used propensity-score matching to identify an appropriate set of households to act as a comparison group for the households participating in the RSE, and then used panel difference-in-differences and fixed effects estimation to assess the impacts of the RSE on household income, consumption, durable assets and subjective well-being.

The baseline and three follow-up rounds datasets are documented here.

Sampling

Sampling Procedure

Researchers used a rolling sampling methodology, adding sample as they received updates of when, where, and who employers were recruiting, with the baseline survey conducted between October 2007 and April 2008. In Tonga, the survey had near national coverage, covering the islands of Tongatapu, Vav'u and 'Eua (containing 90 percent of the population and 92 percent of Year 1 RSE workers). Officials helped to identify households with RSE workers and households with members of the RSE work-ready pool who had not been selected yet. In the same villages, researchers also surveyed randomly selected households, where no one hadn't applied for the program yet. In each village, the goal was to select approximately five households with an RSE worker, three households with a member of the work-ready pool who was not selected, and four households with non-applicants. The resulting baseline survey covered 448 households containing 2,335 individuals in 46 villages.

Response Rate

Attrition was low in the Tongan sample. Of the 448 households in the baseline, researchers were able to re-interview 442 households in the second round survey, 444 in the third round, and 440 in the fourth round.

Data Collection Notes

A baseline survey of households and communities in Tonga was conducted before workers left to work in New Zealand, and then these same households were re-interviewed 6, 12 and 24 months later. The baseline survey was conducted between October 2007 and April 2008. Three rounds of follow-up surveys were then conducted. The first took place between April and July 2008, approximately six months after the baseline survey. This was intended to be a time when RSE workers were still in the midst of their 7 month stint abroad. However, as in practice many contracts were for shorter than 7 months, approximately two-thirds of Tongan RSE workers in the sample had returned by the time of this survey. The second follow-up survey took place between October 2008 and February 2009, approximately one year after the baseline, while the third and final follow-up survey took place between October 2009 and March 2010, two years after baseline.

V2048	s12q2a	Q2A. Which system of RSE selection would you prefer?	discrete	numeric	New Zealand's Recognized Seasonal Employer (RSE) work scheme has now been in place two years and Australia has recently launched its own seasonal work program, the Australian Pacific Seasonal Workers Pilot Scheme. We are interested in your personal opinion about what seems best in terms of recruitment for these types of programs. You do not need to have participated in these programs to answer this question. One approach to recruitment is to pick only a few people from each village, to allow as many villages as possible to participate in the seasonal work program. An alternative is to pick more people from the same village to allow workers to have more friends around them while abroad and to allow communities in Australia and New Zealand to begin to build relationships with particular villages in Tonga. Which system would you prefer?

V2049	s12qb	Q2B. Which mode of RSE participation would you prefer?	discrete	numeric	New Zealand's Recognized Seasonal Employer (RSE) work scheme has now been in place two years and Australia has recently launched its own seasonal work program, the Australian Pacific Seasonal Workers Pilot Scheme. We are interested in your personal opinion about what seems best in terms of recruitment for these types of programs. You do not need to have participated in these programs to answer this question. A second issue is whether many of the same individuals should participate for several years if they like, or if each year different people should be given the chance to work abroad. Employers like to hire the same people again if they are good, since they have already learnt the skills needed to work abroad. But this means fewer people might get to participate in the program. Which would you prefer?

Literal question

New Zealand's Recognized Seasonal Employer (RSE) work scheme has now been in place two years and Australia has recently launched its own seasonal work program, the Australian Pacific Seasonal Workers Pilot Scheme. We are interested in your personal opinion about what seems best in terms of recruitment for these types of programs. You do not need to have participated in these programs to answer this question.

One approach to recruitment is to pick only a few people from each village, to allow as many villages as possible to participate in the seasonal work program. An alternative is to pick more people from the same village to allow workers to have more friends around them while abroad and to allow communities in Australia and New Zealand to begin to build relationships with particular villages in Tonga. Which system would you prefer?

A second issue is whether many of the same individuals should participate for several years if they like, or if each year different people should be given the chance to work abroad. Employers like to hire the same people again if they are good, since they have already learnt the skills needed to work abroad. But this means fewer people might get to participate in the program. Which would you prefer?
