Overview

ABSTRACT

The 2010 Tonga Global School-based Student Health Survey (GSHS) was a school-based survey of students in Forms 2, 3, and 4.

The purpose of the GSHS is to provide data on health behaviors and protective factors among students to:

- Help countries develop priorities, establish programs, and advocate for resources for school health and youth health programs and policies;
- Allow international agencies, countries, and others to make comparisons across countries regarding the prevalence of health behaviors and protective factors; and
- Establish trends in the prevalence of health behaviors and protective factors by country for use in evaluation of school health and youth health promotion.

KIND OF DATA

Sample survey data [ssd]

UNITS OF ANALYSIS

Students aged 13-15 years

Scope

NOTES

The 2010 Tonga GSHS measured alcohol use; dietary behaviors; drug use; hygiene; mental health; physical activity; protective factors; tobacco use; and violence and unintentional injury.

Sampling

Sampling Procedure

The 2010 TONGA GSHS employed a two-stage cluster sample design to produce a representative sample of students in forms. The first-stage sampling frame consisted of all schools containing any of forms. Schools were selected with probability proportional to school enrolment size. 24 schools were selected to participate in the TONGA GSHS.

The second stage of sampling consisted of randomly selecting intact classrooms (using a random start) from each school to participate. All classrooms in each selected school were included in the sampling frame. All students in the sampled classrooms were eligible to participate in the GSHS.

The Tonga GSHS was a school-based survey of students in Forms 2, 3, and 4. A two-stage cluster sample design was used to produce data representative of all students in Forms 2, 3, and 4 in Tonga.

Response Rate

For the 2010 TONGA GSHS, 2,211 questionnaires were completed in 24 schools. The school response rate was 100%, the student response rate was 80%, and the overall response rate was 80%.

Weighting

A weighting factor was applied to each student record to adjust for non-response and for the varying probabilities of selection. $W = W1 * W2 * f1 * f2 * f3$

W1 = the inverse of the probability of selecting the school;

W2 = the inverse of the probability of selecting the classroom within the school;

f1 = a school-level nonresponse adjustment factor calculated by school size category (small, medium, large). The factor was calculated in terms of school enrollment instead of number of schools.

f2 = a student-level nonresponse adjustment factor calculated by class.

f3 = a poststratification adjustment factor calculated by grade.

Questionnaires

Overview

The GSHS uses a standardized scientific sample selection process; common school-based methodology; and core questionnaire modules, core-expanded questions, and country-specific questions that are combined to form a self-administered questionnaire that can be administered during one regular class period.

The TONGA GSHS questionnaire contained 89 questions addressing the following topics:

- Alcohol use
- Dietary behaviours
- Drug use
- Hygiene
- Mental health
- Physical activity
- Protective factors
- HIV infection
- Tobacco use
- Violence and unintentional injury

The questionnaire was developed by WHO and CDC once Tonga given their desirable and final questions as attached.

Data Collection Notes

Survey administration occurred from 6 September to 6 October. Survey procedures were designed to protect student privacy by allowing for anonymous and voluntary participation. Students completed the self-administered questionnaire during one classroom period and recorded their responses directly on a computer-scannable answer sheet. Approximately, 10 Survey Administrators were specially trained to conduct the GSHS. The questionnaire was in English and Tongan version.

Data Processing

Data Editing

The data set was cleaned and edited for inconsistencies. Missing data were not statistically imputed. Software that takes into consideration the complex sample design was used to compute prevalence estimates and 95% confidence intervals. GSHS data are representative of all students attending FORMS in TONGA.
