## Overview

### Identification

---

ID NUMBER  
SPC\_FJI\_2008\_HIES\_v01\_M

### Version

---

VERSION DESCRIPTION  
v01: Clean, labelled and de-identified version of the Master file.

PRODUCTION DATE  
2009

### Overview

---

ABSTRACT  
Household Income Expenditure Survey (HIES) collects a wealth of information on household income and expenditure, such as source of income by industry, household (HH) expenditure on goods and services, and income and expenditure associated with subsistence production and consumption. In addition to this, HIES collects information on sectoral and thematic areas, such as education, health, labour force, primary activities, transport, information and communication, transfers and remittances, food expenditure (as a proxy for HH food consumption and nutrition analysis), and gender.

KIND OF DATA  
Sample survey data [ssd]

UNITS OF ANALYSIS  
Households and Individuals.

### Scope

---

NOTES  
Individual: Relationship to Head of household, ethnicity, residential status, sex, age, marital status, labour force information, education, communication, consumption.

Household: consumption, income, payments, home production, housing characteristics, utilities, communication, vehicles.

KEYWORDS  
HIES, Household income, Household expenditure, CPI, COICOP, Fiji, Consumption, Non-consumption, Home-produced, Poverty

### Coverage

---

GEOGRAPHIC COVERAGE  
National coverage which allows for urban and rural estimates.

UNIVERSE  
The universe of the 2008-09 Fiji HIES is all occupied households in Fiji - private, non-private or institutions.  
Households are the sampling unit, defined as a group of people (related or not) who pool their money, cook and eat

together.

Note that this is not the physical structure (dwelling) in which people live.

The eligibility conditions are:

Must have formed the household at least six weeks prior to interviewer contact

Must either have been in Fiji 12 months or intending to stay 12 months

Must have an eligible adult member who is conversant with the household's income and expenditure and who can be interviewed within the survey period.

# Sampling

## Sampling Procedure

---

The sampling frame for the 2009 Household Income and Expenditure Survey (HIES) was the updated urban and rural Enumeration Areas (EAs) of the 1996 Population and Housing Census. At the Fiji Islands Bureau of Statistics (FIBOS), EAs are used as census collection units and are defined as small geographic units within Administrative Boundaries. There are 100 households in each EA. A frame update exercise was carried out in areas where it was thought that significant changes has taken place: the Suva-Nausori corridor, Nadi, Lautoka, Ba and Labasa.

For urban areas, it was decided to stratify the sample into 14 economic "classes" defined as high class, middle class, housing authority, settlement, squatter, and village (see survey report for more details). In urban areas, the divisions were stratified using a "remoteness index" ranging from 1 (closest to urban areas) to 4 (furthest from urban areas) - resulting in 13 strata.

A two-stage sampling strategy was used. In the first stage, representative samples of urban and rural EAs were selected. The listing stage then collected demographic, economic activity and housing information from all households in the selected EAs. Within each stratum, several EAs or Primary Sampling Units (PSUs) from the frame were selected with probability proportional to size, measured in terms of the total households in the frame. Within each EA, a fixed number of households were selected by systematic random sampling. The last HIES was conducted by FIBOS in 2002-03 with similar sampling methodology to that used for the 2008 survey.

## Weighting

---

A household weight was calculated for each EA using a simple formula with inputs including the population of the stratum, number of households in the EA and the number of households in the sample.

The household weight for all the households in each selected EA was calculated as:

(Population of Stratum i) \* (Listing number of households in EA) .  
 (Frame population of EA) \* (No of hh in sample) \* (Number of EAs selected in stratum)

# Questionnaires

## Overview

---

The questionnaires for this Household Income and Expenditure Survey (HIES) are composed of 4 schedules - each divided into several blocks.

The questionnaire consists of 4 sections:

Schedule 1:

- household listing
- demographic particulars
- economic activity
- education
- housing particulars

Schedule 2 (recurrent expenditure)

- household and other bills
- expenditure on education, health, religion, culture and holidays, etc.
- housing tenure rents and other maintenance costs
- land purchases for residential or farming purposes
- outright purchases of durables
- installment agreement or hire purchase, lay-by, etc. on consumer durables
- outright purchases of consumer semi-durables
- installment agreement or hire purchase, lay-by, etc. on consumer semi-durables
- interest on other borrowings

Schedule 3 (2 week expenditure diary)

- household cash expenditure
- consumption of home-produced commodities
- goods and services taken from household's business
- goods and services obtained from employer
- gifts of cash or goods and services received
- gifts of cash or goods and services given

Schedule 4 (income)

- primary income
- non-primary income

The publication of these questionnaires were in English.

All English questionnaires and schedules are provided as external resources.

# Data Collection

## Data Collection Dates

Start	End	Cycle
2008-05	2009-04	N/A

## Data Collection Mode

Face-to-face [f2f]

## Data Collection Notes

Fieldwork arrangements were delegated to 4 field superintendents who put together their work plans, assigned the supervisors and enumerators, and ensured the regular accountable financing of their required activities, including travel, subsistence and fees.

The arrangements for the interview depended on the availability of the head of household. For the diary, the enumerators were required to visit the household daily for two weeks in order to minimize omissions due to weaknesses in the recall.

The Enumerators were instructed to complete work in a selected EA within a time frame of 3 weeks. The first week was spent on listing all households in the EA and the following two weeks for gathering information on Schedule 2 (recurrent expenditure) Schedule 3 (2 week expenditure diary), and Schedule 4 (income).

## Questionnaires

The questionnaires for this Household Income and Expenditure Survey (HIES) are composed of 4 schedules - each divided into several blocks.

## Supervision

The interviewer fills in the schedules with neat, clearly legible writing and makes sure the households fill in the diary with neat, clearly legible writing. The supervisor then checks the quality of the writing before entering the data.

Supervisors were required to check on enumerators on a daily basis, selecting households at random to confirm that the data recorded was actually reported by the household. These checks improved the data collection practice of the Enumerators; there were a few cases of termination of employment.

## Data Processing

### Data Editing

---

Keeping with internationally accepted Household Income and Expenditure Survey (HIES) methodology, the 2008 2009 HIES estimated "imputed rents" - the estimated net value of owner-occupied dwellings which need to be added to the incomes (and expenditures) of all households which do not pay rents on the dwellings occupied.

The regressions were conducted separately for Central and Western divisions of the Fiji Islands, while the Northern and Eastern Divisions were combined, to improve the statistical reliability of the results. In urban areas, distinctions were made between the types of houses in Central and Western Divisions (major categories used were: concrete with 3-4 bedrooms, concrete with 1-2 bedrooms, wooden, iron, and squatter houses), while in rural areas, the only distinctions were between concrete/wood houses and those made of iron.

The Net Imputed Values were calculated as the Gross Imputed Values (estimated from the regressions using actual rent data) less the Imputed Cost of Owned Houses, which is estimated as an aggregate percentage of actual repairs and maintenance plus interest component of instalment payments plus property rates.

Data processing was supervised by Toga Raikoti, Acting Principal Statistician, FIBOS, using the CSPro software.

## Data Appraisal

### **Other forms of Data Appraisal**

Expenditure is usually better reported than incomes. Where the former exceeded the latter, Enumerators were required to re-question the relevant households for possible omissions of incomes. Enumerators were also trained to probe further where they observed that households had income-earnings assets but were not reporting any related incomes. Enumerators and Supervisors were also required to check the validity of any large incomes and expenditures reported.

### Poverty Trends, Profiles and Small Area Estimation (Poverty Maps) in Republic of Fiji (2003-2009)

Title	Poverty Trends, Profiles and Small Area Estimation (Poverty Maps) in Republic of Fiji (2003-2009)
Author(s)	Fiji Islands Bureau of Statistics Social Protection Unit, Human Development Sector Unit - East Asia and Pacific Region - The World Bank
Date	2011-08-15
Country	Fiji
Language	English
Description	This report presents a detailed analysis of household poverty and its drivers - family, labor and human capital outcomes, social assistance transfers, and geography - based on new expenditure based poverty measures. The report is the culmination of a comprehensive year-long AusAIDfunded collaboration between the Fiji Islands Bureau of Statistics (FIBOS) and the World Bank to develop new poverty measures and maps that produce poverty estimates at highly disaggregated levels.
