Sampling

Sampling Procedure

This is a Census of the Population which covers 100% of the Tuvalu population which does not have any sampling procedures.

Questionnaires

Overview

The 2017 Tuvalu Mini-Census CAPI questionnaires is divided into 2 sections:

- 1) A household questionnaire which was used to collect information on all household characteristics (dwelling).
- 2) A personal questionnaire administered in each household to all household members currently residing or away on temporary basis during census night.

The Household section of the questionnaire covers areas of household characteristics such as the type of living quarters, house ownership, construction of the house, source of drinking water, source of cooking energy, source of lighting, electrical appliances, etc.

The second section of the Questionnaire module or the Personal (Individual) section covers all household members demographic characteristics, social and economical backgrounds.

The Census Questionnaires has questions both in English and also in the local Tuvaluan language.

Data Collection Notes

The Central Statistics Division (CSD) recruited and trained 8 Census trainers to train the Census Fieldworkers in the outer islands with the assistance from the Pacific Community (SPC). All the trainers were present in the outer islands during the fieldwork and therefore they were involved in supervising the enumerators and responsible for returning all census fieldwork materials especially the census questionnaires safely to the CSD.

Interviews were conducted in two languages, English or in Tuvaluan, depending on the respondents choice of language in which they are most comfortable with.

Supervision

Allocation of the fieldworkers was planned as 1 fieldwork Supervisor has to supervise 3 Enumerators. About 50 households per Enumerator on Funafuti and about 80 households per Enumerator at the outer islands.

The Census comprise of 34 Enumerators, 13 Supervisors and 6 Headquarters.

The Enumerators are mainly accountable for enumerating every person and households of their enumeration areas during the 2 weeks assigned for census fieldwork. The Supervisors are responsible for checking their appointed Enumerators work to ensure that they are not missing out on anyone in their respective enumeration areas, when the Supervisor is satisfied with the collected data, then will synchronize its data to the Headquarters for the final check on every information collected.

All the fieldworkers were provided with a CAPI device, the list of the households, maps and control forms of their corresponding enumeration areas to ensure that none of the residents and households would be missed out by the census interviews during the fieldwork.

Data Processing

Data Editing

As the 2017 Mini-Census was the first to use the CAPI devices, it minimizes the entry errors as it contains automatic skips depending on certain conditions and other validation codings, etc. However, the cleaning and data editing mostly took place during the "Processing phase".

Data Appraisal

Estimates of Sampling Error

As this is a Census, it covers the whole population.

Interviewer instructions

The proportion of households using solid fuels is one of the indicators used in the monitoring internationally agreed development goals. There are important linkages between household solid fuel use, indoor air pollution, deforestation and soil erosion and greenhouse gas emissions. The type of fuel and participation in cooking tasks are important predictors of exposure to indoor air pollution. It is thus recommended to collect information on the fuel used for cooking by each housing unit. Fuel used for cooking refers to the fuel used predominantly for preparation of principal meals. If two fuels (for example, electricity and gas) are used, the one used most often should be enumerated.

Post question

Continue to "relate" question

Interviewer instructions

Year should be in the format YYYY (4-digit from 1907-2017). Enter '9999' for unknown year.

The date of birth section requires the official date that the current person was born. Be sure that you get the proper respondent to answer questions. For example, in the illustration above the detail section are all the questions related to Gomez, so Gomez is the proper person to respond to the questions. However, this is not always possible and in rare case such as unavailability, age and/or disability we will accept proxy (representation) respondents. In cases where the respondent does not know the day, month, or year of birth - then entering a "99" for day, "99" for month, and "9999" for year will be accepted.
