# Sampling

## **Sampling Procedure**

---

This is a Census of the Population which covers 100% of the Tuvalu population which does not have any sampling procedures.

# Questionnaires

## Overview

---

The 2012 Tuvalu Census questionnaires is divided into 2 sections:

- 1) A household questionnaire which was used to collect information on all household characteristics (dwelling).
- 2) A personal questionnaire administered in each household to all household members currently residing or away on temporary basis during census night.

The Household section of the questionnaire covers areas of household characteristics such as the type of living quarters, house ownership, construction of the house, source of drinking water, source of cooking energy, source of lighting, electrical appliances, etc.

The second section of the Questionnaire module or the Personal (Individual) section covers all household members demographic characteristics, social and economical backgrounds.

The Census Questionnaires has questions both in English and also in the local Tuvaluan language.

# Data Collection

## Data Collection Dates

Start	End	Cycle

## Data Collection Mode

Face-to-face [f2f]

## Data Collection Notes

The Central Statistics Division (CSD) recruited and trained 8 Census trainers to train the Census Fieldworkers in the outer islands with the assistance from Secretariat of the Pacific Community (SPC). All the trainers were present in the outer islands during the fieldwork and therefore they were involved in supervising the enumerators and responsible for returning all census fieldwork materials especially the census questionnaires safely to the CSD.

Interviews will be conducted in two languages, English or in Tuvaluan, depending on the respondents choice of language in which they are most comfortable with.

## Supervision

Allocation of the fieldworkers was planned as 1 fieldwork Supervisor has to supervise 2 Enumerators. About 30 households per Enumerator on Funafuti and about 50 households per Enumerator at the outer islands.

The Census comprise of 29 Supervisors, 89 Enumerators and 6 Official Supervisors.

The enumerators are mainly accountable for enumerating every person and households of their enumeration areas during the 2 weeks assigned for census fieldwork. There were 3 types of enumerators. One was responsible for filling of the main census questionnaire, the second enumerator responsibility is to complete the measurements form for floor size and water

storage system of households. The third type of enumerator was to conducting a separate interview for literacy only.

All the fieldworkers including the officials were provided with the list of the households, maps and control forms of their corresponding enumeration areas to ensure that none of the residents and households would be missed out by the census interviews during the fieldwork.
