This documentation is using the dataset that was acquired in August 2019 during a South-South mission between Tonga and Cook Islands. The datasets were originally in Excel format and were then exported to Stata (12).

Overview

ABSTRACT
The Census provides a unique source of detailed demographic, social and economic data relating to the entire population at a single point in time. The most fundamental questions it will answer concern the size and distribution of the entire population, the extent to which men and women participate in the economy, and the nature of housing and household facilities.

Our country is constantly changing and information collected will allow policy planners to measure the developments of our society and to make decisions about future needs of our communities. Emphasis for the CPD is on renewable energy. Government has set itself policy goals that by 2015, 50 percent of Cook Islands electricity demand will be provided by renewable energy and 100 percent in 2020. Culture has also been identified as a priority of Government.

The topic content of the 2011 Census has been driven principally by the demands and requirements of users of census statistics, the evaluation of the 2006 Census, and the priorities of the Government as stated in its manifesto, and the advice and guidance of organisations with experience of similar operations. These have been determined by extensive consultations with various Ministries of government and non government organizations (NGO).

The topics proposed for the census are those most needed by the major users of census information and questions have been devised to produce reliable and accurate data. In each case, no other comparable and accessible source of the information is available in combination with other items in the census.

In assessing which topics should be included in the census, Statistics Office has had to consider a number of factors. The criteria for evaluating the strength of users' requirements for information were that:

· there should be a clearly demonstrated and significant need

· the information collected was of major national importance

· users' requirements could not adequately be met by information from other sources

· there should be a requirement for multivariate analysis (that is the ability to cross-analyze one variable against other), and

· there should be consideration of the ability for comparison with the 2006 Census wherever possible

Questionnaires

Overview

The questionnaire which was published in English, can be found as External Resources.

The questionnaire of the early Cook Islands censuses was limited; they consisted oh head counts only. With the passage of time, the topics covered by the questionnaires expanded. Gradually, questions on sex, age, marital status, religion, education, employment, etc have been included. Questions on unpaid work and income earned were included for the first time in the 1996 Census. In the 2011 Census, questions on renewable energy and culture was included.

The questionnaire of the 2011 Census of Cook Islands is divided into 2 main forms:
-Dwelling form: which covers topics like: Household characteristics, water supply, energy, toilet, tradition, communication & technology, waste management, involvment in agriculture, fishing, farming, equipment, transport.
-Personal form: which covers topics like: Individual characteristics, disability, literacy and language, information & technology, education, economic activity, income, narcotics, cultural activities and fertility.

SELECTION OF TOPICS AND QUESTIONS:
The topic content of the 2011 Census has been driven principally by the demands and requirements of users of census statistics, the evaluation of the 2006 Census, and the priority of government as stated in this Governments Manifesto, and the advice and guidance of organizations with experience of similar operations. These have been determined by extensive consultation with various Ministries of government and NGO's.
Emphasis for this Census was on Renewable Energy and Cultural Statistics. Government had set itself a policy goal that 50 percent of its electricity demands to be provided by renewable energy in 2015 and 100 percent in 2020.

The 2011 Census questionnaire is designed to be machine readable that is questionnaires will be scanned.

Data Collection Notes

CHALLENGES ON THE FIELDWORK:
Transportation - Transportation to the Northern Group has always been difficult and expensive. Arrangements have been made with Police Department for the use of the patrol boat "Te Kukupa" to transport staff and census materials to the Northern Group islands. Cost of chartering Te Kukupa is estimated to $47k and plans to cost share with other agencies are now being negotiated.

Currently the date of taking of the census is at the beginning of festive periods where the population is very mobile. Last Census we had to enumerate the "Tere Parties" (travelling groups) in Rarotonga and repatriate them back to their island of usual resident. We will identify a time where the population is at least stationary.

Content	This file is the Person dataset of the 2011 Population and Housing Census of Cook Islands. This dataset contains information on individual characteristics collected using the Personal Form of the questionnaire.
Cases	17794
Variable(s)	141
Structure	Type: relational Keys: REC_hh_id(Recoded - unique household number), REC_pers_id(Recoded - unique person number)
Version	Version 01: Cleaned, labelled and de-identified version of the Master file.
Producer	Cook Islands Statistics Office.
Missing Data	For de-identification reasons, some identifying variables were removed from this dataset: -names -dates of birth. Also, some value labels are missing from this dataset (e.g.: adress on p05 or occupation on p29...etc), as the list of codes was missing by the time this documentation was done.
