Overview

ABSTRACT

The purpose of the HIES survey is to obtain information on the income, consumption pattern, incidence of poverty, and saving propensities for different groups of people in Federated States of Micronesia (FSM). This information will be used to guide policy makers in framing socio-economic developmental policies and in initiating financial measures for improving economic conditions of the people.

Some more specific outputs from the survey are listed below:

- a) To obtain expenditure weights and other useful data for the revision of the consumer price index;
- b) To supplement the data available for use in compiling official estimates of household accounts in the systems of national accounts;
- c) To supply basic data needed for policy making in connection with social and economic planning, including producing as many of FSM's National Minimum Development Indicators (NMDI's) as possible;
- d) To provide data for assessing the impact on household living conditions of existing or proposed economic and social measures, particularly changes in the structure of household expenditures and in household consumption;
- e) To gather information on poverty lines and incidence of poverty throughout FSM.

Sampling

Sampling Procedure

The first stage of the sample design involved splitting the 4 states of FSM into strata which separated areas based on the level of access to certain facilities. In all, three different ratings of access were developed: "good access", "medium access" and "rare access". For the state of Kosrae, all areas were considered to have "good access".

Once the stratum had been formed then the sample allocation was performed. This was initially done at the state level, with the smaller states of Kosrae and Yap getting a higher fraction of sample than the larger states of Chuuk and Pohnpei. This was so that suitable quality results could still be achieved for the smaller states. Once the sample size was determined for the states, this was then split up amongst the stratum. The allocation was done to try and spread the workloads out as much as possible across each stratum. State managers were then required to determine the number of field workers they would require, keeping in mind it was more suitable to recruit interviewers from those selected areas.

The sample within each stratum was selected by initially selecting EAs, and then selecting 10 households per selected EA which in turn would equate to one workload over a 3 week period for one interviewer.

94.6 per cent of households across FSM are in-scope of the survey. Chuuk with only 89.2 per cent of households in scope had the lowest representation, whilst Kosrae had all households in scope for the survey.

For the 2013/14 FSM HIES, it was decided by the Technical Working Group (TWG), which comprised of members from Statistics Division and the Statistics State Managers, that a responding sample of 10 per cent would be desirable. In order to achieve this, undertake the following steps:

- 1) Allocate a 10 per cent responding sample to each of the 4 states proportional to the square root of the population (households)
- 2) Distribute this sample to each stratum, separately within state, proportional to the stratum population for that state
- 3) Increase each stratum sample size to allow for 15 per cent sample loss
- 4) Adjust each stratum sample to allow for workload sizes of 10 households, also topping up the "good access" stratum where variability in survey responses is expected to be greater.

Weighting

Weights were produced at the stratum level, and adjustments were made to account for scope reductions.

Questionnaires

Overview

A Questionnaire consisting of four Modules and a Weekly Diary covering 2 weeks was used for the Federated States of Micronesia (FSM) Household Income and Expenditure Survey (HIES) 2013. Each Module covers distinct but connected portion of the Household.

The Modules & Diaries are as follows:

- Module 1: Demographic Information
- Module 2: Household Expenditure
- Module 3: Individual Expenditures
- Module 4: Income
- Diary Week 1: Covering the first 7 Days (1 - 7)
- Diary Week 2: Covering the second 7 Days (8 - 14)

Supervision

HIES Staff in the states was not be expected to undertake all the field work. As such, additional interviewers and supervisors were required throughout the course of the project to assist with this work. Given the survey is expected to run over the course of 12 months, and interviewers enumerated more than one workload (10 households), the number of additional field staff was significantly lower than the last HIES conducted in the FSM.

State managers, in consultation with the HIES survey manager, will take charge of all the logistical aspects associated with the survey field work, including dispatching and collection of forms. Plans will be established prior to commencement of fieldwork as to where interviewers and supervisors will be expected to operate throughout the 12 months, and it is the responsibility of the state managers to see that this happens.

Number of additional supervisors and interviewers required:

Yap: 1 supervisor and 12 interviewers

Chuuk: 2 supervisors and 25 interviewers

Pohnpei: 2 supervisors and 10 interviewers

Kosrae: 5 interviewers

TOTAL: 5 supervisors and 52 interviewers

Data Processing

Data Editing

Program: CSPro 5.1x

Data editing took place at a number of stages throughout the processing, including:

- a) Office editing and coding
- b) During data entry; Error report correction; Secondary editing by Quality Control Officer (QCO)
- c) Structure checking and completeness

Detailed documentation of the editing of data can be found in the "Data processing guidelines" document provided as an external resource.
