Overview

ABSTRACT

A strong evidence base is needed to understand the socioeconomic implications of the coronavirus pandemic for the Papua New Guinea. High Frequency Phone Surveys (HFPS) are set up to understand these implications over the years. This data is the fourth round in a series of mobile phone surveys.

Three prior rounds of the HFPS were conducted in June 2020 (Round 1), Dec 2020-Jan 2021 (Round 2), and July-Aug 2021 (Round 3). Round 4 interviewed 2,714 households across the country between November 23, 2021, and December 10, 2021, on topics including vaccines of COVID-19, employment, income, food security, coping strategies, health, public trust and security, assets and well-being.

Sampling

Sampling Procedure

As the objective of the survey was to measure changes as the pandemic progresses, Round Four data collection sought to re-contact all 2,533 households contacted in Round Three. Of the Round Three households, 1,038 were successfully re-contacted.

For PNG round 4, a total of 2,714 successful surveys were completed, among which 1,038 households were pre-loaded, and 1,676 were replacement households. Questionnaires and preloaded numbers were supplied by WBG team to support dialing out to lead list for the campaign survey. For the replacement numbers, 12,000 extra leads (replacement numbers) were extracted from the survey firm's (Digicel's) database. Numbers were randomly allocated to enumerators per listings for outbound dialing, and the numbers were equally distributed amongst each PNG region and province to collect quality data as per the requirements. A total of 88 districts were contacted for the WBG survey.

For more information on sampling, please refer to the presentation slides provided in the External Resources.

Response Rate

Response rate for returning households: 40.98%.

Weighting

The sampling weights were developed for round four of the Papua New Guinea high frequency phone survey in a series of steps. Information from the 2016-2018 Demographic and Health Survey (DHS) was used to construct weights and to reflect nationally representative estimates of the socioeconomic impacts of COVID-19. While a good starting point, this strategy does not address the main shortcoming of using random digit dialing, which is that the resulting data is representative of the population of mobile phone owners, rather than the population across the country. According to the most recent data (from Digital 2021 report for Papua New Guinea by DataReportal: <https://datareportal.com/reports/digital-2021-papua-new-guinea>), the number of mobile connections in Papua New Guinea in January 2021 was equivalent to 34.4% of the total population. Coverage is concentrated in population centers and better off households and individuals are more likely to have a mobile phone which is charged and turned on. Therefore, the pool of respondents is very different from a representative sample of the Papua New Guinea population.

Weights are required for unbiased estimation, because the survey was administered by mobile phones, the respondents were a representative sample of mobile phone holders, not the population overall; and non-random non-response can exacerbate these differences. Using the 2016-2018 DHS, and comparing individuals that own a phone (either landline or a mobile phone) and those without one, we find that mobile phone holders are more likely to be urban, wealthier, and more highly educated. To make inferences at the level of the population instead of mobile phone holders, it was necessary to reweight the survey data.

Definitionally, the DHS deciles each contain 10 percent of the sample. Using the maximum and minimum threshold values for the DHS deciles to map the mobile phone survey results, it is clear there is a strong bias toward the upper deciles (wealthier) households in the distribution. While weighting can adjust for the bias, there are only 0 and 69 observations in the bottom two deciles of the distribution, respectively. These sample sizes are too small to yield estimates of adequate precision to report results.

Therefore, direct analysis is limited to the bottom four deciles (bottom 40 percent), and then the middle two deciles (middle quintile) and top four deciles (top 40 percent). In addition, each statistic is reported with its confidence interval and all econometric findings are statistically significant, unless otherwise stated.

The "weight" variable in the household dataset is called 'weight_hh' and represents household cross-sectional weights.

The individual data set contains weights for vaccine analysis and employment analysis and are named as covid_weight and

emp_weight, respectively.

Questionnaires

Overview

The questionnaire - that can be found in the External Resources of this documentation - was developed both in English and in Pidgin.

The survey instrument for the fourth round consisted of the following modules:

- Basic information,
- Vaccines of COVID-19,
- Employment and Income,
- Access food & food security,
- Coping strategies,
- Health,
- Public trust and security,
- and Assets and wellbeing.

Data Collection Notes

The data was collected by Digicel. Digicel is a mobile phone network provider in Papua New Guinea. The dates of implementation were between November 23, 2021, and December 10, 2021, and the implementation method was Random Digit Dialing using mobile phone numbers. Since phone numbers in the Papua New Guinea do not contain any location information, it was not possible to do any geographical targeting, and therefore the sample was developed based on targets for completed interviews by location.

Variable "hhid" is the unique identifier in the household dataset and "indiv_id" is the unique identifier in the individual dataset.

Questionnaires

The questionnaire - that can be found in the External Resources of this documentation - was developed both in English and in Pidgin.

The survey instrument for the fourth round consisted of the following modules:

- Basic information,
- Vaccines of COVID-19,
- Employment and Income,
- Access food & food security,
- Coping strategies,
- Health,
- Public trust and security,
- and Assets and wellbeing.

Data Processing

Data Editing

At the end of data collection, the dataset was cleaned by the World Bank team. This included formatting, and correcting results based on monitoring issues, enumerator feedback and survey changes. Data was edited using STATA. The data is presented in two data sets: household data set and individual data set. The total number of observations in the household data set is 2,714 and is 3,605 in the individual data set. The individual data set contains the employment, income, vaccine, and public trust information for all individuals, whereas the household data set contains information about public services, staple food access and food security, coping strategies, health care, and awareness of COVID-19.

Other Processing

Data was collected and managed using the Survey Solutions software package. Imputation was done for missing education values in calculating both household and individual weights.

Description	This file is the report of the fourth round of the High Frequency Phone Survey to assess the socio-economic impacts of COVID-19 in Papua New Guinea. It contains some of the main findings from the survey's round 4. Economic recovery was weak with household incomes falling. Low vaccination rates may further hinder recovery and welfare outcomes:
Abstract	<ul style="list-style-type: none"> • Consistent with the weak economic recovery in 2021 (GDP growth of 1 percent), the share of employed adults was stable from December 2020 to December 2021. For many households, particularly rural households and those in the bottom 40 percent of the wealth distribution, incomes were under pressure. • To cope with economic pressures households used coping strategies – such as selling assets, which will not be sustainable in the long run. One in four households experienced moderate or severe food insecurity. • Community security concerns did not worsen in the six months to December 2021. However, close to half of households perceived alcohol and drug abuse to be worsening. • Vaccine hesitancy increased over the six months to December 2021. • Fewer households were worried about their finances in December 2021 than June 2021.
