#### ABSTRACT

The phone survey was conducted to gather data on the socio-economic impacts of COVID-19 crisis, as well as the Hunga Tonga-Hunga Ha'apai volcanic eruption and tsunami in Tonga. Round 2 interviewed 2,503 households both in urban and rural regions of the country from July 2022 to August 2022. Survey topics included employment and income, food security, coping strategies, access to health services, asset ownership, and preparedness.

Purpose of Round 2 survey was to continue tracking the impact of the crises after Round 1, which was completed in April, 2022 - May, 2022. Additionally, round 2 survey besides the household information, gathers data on individual level that was not included in Round 1. Two individual datasets explore adult employment and child education.

While these findings are not without their caveats due to the lack of baseline data, constraints of the mobile phone survey methodology, and data quality constraints, they represent the best estimates to date and supplement other data on macroeconomic conditions, exports, firm-level information, etc. to develop an initial picture of the impacts of the crises on the population.

# Sampling

## Sampling Procedure

---

The Tonga HFPS Round 2 sample was generated in three ways. The first method is Random Digit Dialing (RDD) process covering all cell telephone numbers active at the time of the sample selection. Approximately 16% of the sample was generated through RDD.

The RDD methodology generates virtually all possible telephone numbers in the country under the national telephone numbering plan and then draws a random sample of numbers. This method guarantees full coverage of the population with a phone.

First, a large first-phase sample of cell phone numbers was selected and screened through an automated process to identify the active numbers. Then, a smaller second-phase sample was selected from the active residential numbers identified in the first-phase sample and was delivered to the data collection team to be called by the interviewers. When a cell phone was called, the call answerer was interviewed as long as he or she was 18 years of age or above and knowledgeable about the household activities.

It was initially planned to stratify the sample by island group based on the phone number prefixes. However, this was not feasible given the high internal migration across islands and the atypical assignment of phone number prefixes across islands in Tonga. The sample is overrepresenting urban areas and the population of Tongatapu.

Approximately, 56% of the Round 2 sample was made up of the returning respondents from Round 1 who were recontacted.

The remaining 28% of the R2 respondents was taken from Tonga's Household Income and Expenditure Survey (HIES).

## Response Rate

---

Total number of households interviewed for round 2 survey was 5,085 out of which 2,503 finished the interview - about 50% success rate. More specifically, response rate for R1 recontacted households was 60.8%, and the response rate for RDD sample was 24%.

## Weighting

---

The sample is weighted to adjust for population distributions across Island groups and other socio-economic characteristics, including the wealth index.

# Questionnaires

## Overview

---

The questionnaire was developed in both English and Tongan. Sections of the Questionnaire:

1. Interview Information
2. Basic Information
3. Vaccine Information
4. Health
5. Education
6. Food Insecurity
7. Employment
8. Income
9. Coping Strategies
10. Assets
11. Digital
12. Recontact

## Data Collection

### Data Collection Dates

Start	End	Cycle
2022-07-13	2022-08-26	Data collection

### Data Collection Mode

Computer Assisted Telephone Interview [cati]

### Data Collection Notes

The survey management team of Sistemas Integrales included a Project Director, a Project Manager, a Fieldwork Manager, and a Data Manager. The data collection was implemented over 29 days with a team formed by one local coordinator, 20 interviewers and 4 supervisors. The average interview time for 158 question-long survey was 24.5 minutes.

### Questionnaires

The questionnaire was developed in both English and Tongan. Sections of the Questionnaire:

1. Interview Information
2. Basic Information
3. Vaccine Information
4. Health
5. Education
6. Food Insecurity
7. Employment
8. Income

## Data Processing

### Data Editing

---

At the end of data collection, the raw dataset was cleaned by the survey firm and the World Bank team. Data cleaning mainly included formatting, relabeling, and excluding survey monitoring variables (e.g., interview start and end times). Data was edited using the software STATA.

### Other Processing

---

For consistency purposes, all categorical levels were labeled identically across variables, where applicable.
