

# NCD 2012 EGRA Baseline Data Set

---

## Statistics

The Laos EGRA was conducted in 2012. It surveyed 1266 students in Grades 2, 3 and 4.

It also contains accompanying surveys from 23 teachers.

The data set was constructed from three survey instruments:

- the EGRA Laos survey
- the student context survey
- the teacher context survey
- the Classroom Observational Snapshot survey

## Format

A complete description of the data and variables is given in the accompanying data dictionary.

The dataset is broken down into several sections:

Preamble:

- this contains identifying information on student country, district, age, school and grade.

EGRA survey:

- this contains the information on survey responses for each of the eight sub-tests, including all individual item responses.

Student context survey:

- this contains the student responses to the survey and the language they responded in as noted by the enumerator. Please see the instrument for detail.

Teacher context survey:

- this was a separate survey distributed to teachers and later matched (with varying success) to student responses.

The classroom observational snapshot:

- this was a separate survey which examined the physical space of the classrooms, languages used and their composition.
